

FROM THE DESK OF WILLIAM GRAND, D.D.S.

April Newsletter 2024

Greetings Dr. William From Grand Family Dentistry!

Some Dental Problems Are Easy to See!

One of the easiest dental problems to spot is a buildup of plaque. Plaque is the soft, sticky layer of bacteria that is constantly forming on the teeth. It is usually invisible to the naked eye. However, when a person is not brushing adequately, enough plaque can build up to appear as a thick, whitish coating on the teeth at the gum line. If not removed, it can lead to gum disease.

Another dental problem that is easy to spot is missing teeth. Many patients assume that if they are still able to eat, their teeth are fine. But often losing just one tooth can have a cascading effect on a patient's dental health. Losing one tooth can cause a loss of support; teeth may begin to drift into the empty space, causing a change in the bite. It also forces the remaining teeth to carry an additional load, sometimes past their ability to adapt. In most cases, when even one tooth is lost, the remaining teeth suffer and are more likely to be lost as well.

Our focus is in the treatment of problems such as these. For the care you need, please call our office at (844)62-GRAND or email us at contact@GrandFamilyDentalCare.com today.

Ain't Life Grand!

Best Regards,
